With a high success rate for niche markets (such as architectural design), AutoCAD has been adopted by major industries (e.g., automotive, aerospace, construction) and used for multiple engineering fields. Its popularity has increased the use of CAD (computer aided design) worldwide, where it is estimated that there are more than 21 million licensed users of AutoCAD and more than 38 million licensed users of AutoCAD LT. For example, AutoCAD is used to produce: Preliminary designs and details for automobiles Master models for aircraft Simulated models for robotics Designs for the steel industry Programs to create working prototypes for test drive Instructions for building houses Top-down drawings for subway tunnels The AutoCAD software suite consists of three main products: AutoCAD AutoCAD LT AutoCAD WS AutoCAD LT is a version of AutoCAD for smaller, lower-end computer systems with limited computing and graphics power. AutoCAD LT is AutoCAD's main competitor for desktop solutions, and it competes with smaller, more affordable (and less powerful) alternatives such as Inventor, FreeHand and MicroStation. While AutoCAD LT was originally intended as a lite version of AutoCAD, since its release it has evolved into an entirely different product with its own set of features and capabilities. In addition to LT, AutoCAD is also available for laptops and mobile devices. AutoCAD LT and AutoCAD are used for creating 2D architectural design and drafting software solutions for both medium- and small-size businesses, as well as large-scale global design and drafting software solutions. AutoCAD LT offers the same set of features as AutoCAD and is often marketed as a smaller, more affordable alternative to AutoCAD. AutoCAD LT is based on the same graphical user interface (GUI) as AutoCAD, and includes all of AutoCAD's capabilities and features. AutoCAD LT includes most of AutoCAD's capabilities and features. For example, AutoCAD LT includes most of AutoCAD's drafting tools, including AutoCAD's Shape Builder and the tools that generate 2D objects and surfaces, such as Grids and Dimensions. AutoCAD LT does not include 3D drafting, or the 3D modeling capabilities found in

Markup Import and Markup Assist This section covers the Markup Import feature, which provides the ability to import markup into AutoCAD drawings. If you need a quick and easy way to label drawings, this is the way to go. Markup Import The Markup Import tool was created to provide users with a simple method for capturing design and manufacturing information into your drawings. You can import information from a variety of sources, such as a Microsoft Word document, a table from a database, or a PDF. You can also import text directly into the drawing by typing it in. To use the Markup Import tool, follow these steps: 1. Create a new drawing. The Markup Import tool is one of the commands found on the Insert tab in the Drawing toolbar. 2. Click the Markup Import button to open the Markup Import dialog box. 3. Choose from the list of formatting options. You can import a table from a Microsoft Word document (see the drawing on the right). You can also import a table from a database. This feature is new in AutoCAD 2023. 4. Click the Import button. 5. Type the name for the markup category into the text box. You can use a single letter to identify a category. For example, you could type M for manufacturing. 6. Choose how the imported text appears in the drawing. The text can be displayed with an outline, a box, or a title. You can also choose to automatically create a text box around the imported text. 7. Type a title for the text box. 8. Type the text to import into the text box. The imported text appears in the drawing in a text box that is named after the category you selected. You can also click the Type a Custom Name button and enter a custom name to name the text box. 9. Click OK. 10. Repeat steps 3 through 8 for any other text boxes you want to create. 11. Select the check box to Automatically Associate Text Boxes with Markups. By default, only the first text box you create is associated with the markup category. This setting allows you to associate text boxes with a category after you create them. Note: This is a new option in AutoCAD 2023. You can use this feature to create
