A looming catastrophe is taking shape in the US with the introduction of "poison pills", making it impossible to form a majority in a congress controlled by the Democrats. If the Democrats lose control of the House of Representatives, and become a minority party, some of the conservative Republicans will be able to exert control over the "progressive" agenda. Democrats have been negotiating with Republicans for more than two years, but they have been unable to come to an agreement on government spending and health care. It has become clear that a congressional showdown is looming over the tax rates of both parties, and the new "poison pills" are already threatening to sink the talks. The "poison pill" controversy comes from the fact that the Republicans insist that any compromise deal must include the end of Obama's health care program, the Affordable Care Act, known as Obamacare. While the Republicans want a "repeal and replace" of Obamacare, the Democrats want to keep it in place – a "fix it and don't fix it" position. This is a reflection of the internal divisions within the Democratic Party, as the "Democrats for Life of America" (DFLA), have been negotiating on the terms of Obamacare. The DFLA is a collection of pro-life Democrats, who disagree with the Democrats' support for legalised abortion up to birth. According to the DFLA, the new "poison pills" being floated are a direct threat to Obamacare. The DFLA campaign against the Democrats has been a thorn in the side of the Obama administration. According to the DFLA, the Democrats are pro-abortion because of their support for legalised abortion up to birth. "The President, Secretary Kathleen Sebelius, and Speaker Pelosi's position is that the House should be voting on legislation to continue taxpayer-subsidized abortion," the DFLA said in a statement. "It is unconscionable that Democrats would vote against a bill to provide lifes
