What different from other multi effects processors: - It has multi effect processor design, to connect plug-ins in different

ways. - It uses multiple connection blocks for effects. - It shows a unifying interface for effect controls, parameters and everything. - It has four main modes for processing: - Recording - Mixing - Mastering - Processing - Many ways to connect plug-ins: - In one signal chain - In several signal chains - In a master output - Any combination of signal chains and output - Many effect plug-ins can be connected in any combination - In multi effect chains - In multi effect chains and

outputs - Linked - Via dynamic linking to insert one effect to the other - Via dynamic linking to insert a signal chain to the other - Via dynamic linking to insert one effect to the master bus output
